

VIZpin Firmware v1.21.1 Release Notes

Products affected: EZ1, VP1
Release date: October 20, 2017
Release type: Minor Release

Firmware v1.21.1 for VIZpin reader-controllers is a recommended update that we suggest be applied to all units running earlier versions of firmware.

Firmware v1.21.1 supersedes firmware v1.20.22.

Enhancements:

1. Significantly improved BLE performance for Android Smartphones, as well as small improvements for iOS
2. Modified vProx success front LED color from blue to green
3. Dramatically improved all encryption and decryption performance, leading to significantly less dropped BLE connections, faster connection speeds, and less Bluetooth Panics
4. Modified the default reader name from "ECKey VP1" to "VIZpin VP1"

Fixes:

1. Resolved issue where LINK commands could be reported as applied when they were not surrounding various reset conditions
2. Resolved issue where the reader could lose BLE connectivity until admin button is pressed
3. Resolved a number of conditions which could potentially result in a dim front status light
